DETAILED ACTION

This office action is in response to the after final amendment received February 9, 2004. In accordance with the amendment, previously indicated allowable subject material has been amended into independent claims 1, 7, 15, 24, and 28. Claim 3 has also been amended to depend upon claim 1, while claims 2, 4, and 23 have been canceled. Claims 1, 3, 5-22, and 24-44 are currently pending.

Allowable Subject Matter

1. Claims 1, 3, 5-22, and 24-44 are allowed. The following is an examiner's statement of reasons for allowance: the relevant prior art of record does not teach or reasonably suggest the further dependent limitations included in the independent claims 1, 7, 15, 24, and 28 (see Final Rejection 12/11/03). The closest prior art of record (Keene et al. U.S.P. No. 4,813,766) teaches an optical system and method comprising: an optical pulse source generating an input, a controllable delay structure providing selectable delay for each optical output pulse stream with a controllable delay relative to the input. Keene et al. '766 does not reasonably suggest the limitations as included by the after final amendment.

Regarding independent claims 1, 7, 15, the relevant prior art of record does not teach or reasonably suggest a wavefront compensator integrated with an array of optical apertures or, a plurality of tapped output couplers arranged in an increasing distance from the proximal end.

Regarding independent method claims 24 and 28, the relevant prior art does not teach or reasonably suggest coupling the pulse stream into a layer of electro-optic material having multiple output ports, and coupling a portion of the pulse stream out of

Art Unit: 2874

the layer at each output port, the controllable time delay function put in use by voltage control.

Regarding claims 31-43, the pertinent prior art does not teach or reasonably suggest an optical beam steering device comprising: at least one layer of electro-optically active material, the layer having a proximal end and distal end, a means for applying a voltage across the layer, a plurality of tapped output couplers, each tapped coupler disposed in an increasing distance from the proximal end, and an array of apertures, each aperture receiving an optical beam output from a corresponding tapped output coupler of the plurality of output tapped couplers. Method restrictions (claims 40-43) of same device of independent claim 31 are also allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure, with respect to the state of the art of optical delay systems: PTO-892 form reference A and B.
